ANTI KICKBACK

Anti kick-back technology ensures the following does NOT happen:

- Blade being grabbed by the work-piece
- Resulting in work-piece being thrown back toward the user
- Especially dangerous on hand held machinery
- The user is more open to kick back debris. Shown here as (A), (B) & (C)

ATB ALTERNATE TOP BEVEL TEETH

Blade teeth alternate between a right-hand & left-hand bevel. Yielding a smoother cut when crosscutting natural woods and veneered plywood
